

## OUT LINE

On 30 feet of line he moves,  
and usually too fast,  
exploring the full reach of arc  
as I come lagging last.

He sweeps from side to side to side  
to cover all the ground,  
from front to back and back again  
all radii around.

His limit is well circumscribed  
in circular design,  
continuous and movable  
by 30 feet of line.

It seems too small, but proves to be  
enough to satisfy  
his concept of a universe  
with size defined by Pi.

Within this flat parameter  
his world is large as mine,  
full 60 feet diameter  
on 30 feet of line.
